1. Write a C Program to perform all four basic Mathematical Operations on two numbers taken from user input.

f t in

Input Format

- The only line consists of the two elements required to compute the results.

Constraints

- During division, do convert the denominator to a float value in order to receive a correct solution with decimal points.
- Use %2f while specifying the datatype of the result by division where %f refers to the float data type and .2 specifies the number of decimal points required in value.

Output Format

- The first line specifies the output after performing addition on the numbers.
- The second line specifies the output after performing subtraction on the numbers.
- The third line specifies the output after performing multiplication on the numbers.
- The fourth line specifies the output after performing division on the numbers.

Sample Input 0

10 15

Sample Output 0

C

```
1 #include <stdio.h>
2
3
4 int main() {
5
6     int num1,num2,add,sub,mul;
7     float div;
8
9
10    scanf("%d%d",&num1,&num2);
11
12    add=num1+num2;
13    sub=num1-num2;
14    mul=num1*num2;
15    div=num1/((float)num2);
16
17    printf("%d\n",add);
18    printf("%d\n",sub);
```

| | |
|----|------------------------|
| 19 | printf("%d\n",mul); |
| 20 | printf("%0.2f\n",div); |
| 21 | return 0; |
| 22 | } |
| 23 | |
